**BEHAVIORAL HEALTH & CCBHCs**

FDA-CLEARED · CLASS II
US VALIDATED DEVICE LISTING

# Criterion 4.G made primary care screening your responsibility.

SAMHSA criterion 4.g.1 holds a CCBHC responsible for screening and monitoring key health indicators, directly or through a DCO.[1] On antipsychotics, the APA schedule adds weight at every visit for six months.[2]

The **PharmaSmart PS-2000D Health Station** gives clients validated BP, pulse, seated weight and BMI in your lobby, self-service, with no nurse tied up.

**9 yrs**
of life lost in schizophrenia, often to physical illness[3]

**~2×**
CVD mortality in serious mental illness vs others[4]

**90%**
of CCBHCs deliver primary care screening directly[5]

**30**
states selected for the CCBHC demonstration, 2026[6]

## Where it fits your client flow

**Lobby check-in.** BP, pulse and weight are done before the client sees staff.

**Medication visits.** Weight, BMI and BP are recorded before med management.

**Day programs.** A fixed screening point clients can use with no appointment.

**Primary care referral.** Results come with referral prompts for your PCP or DCO.

## What it moves for your CCBHC

**Compliance.** Supports your 4.G protocol with a record of each reading.

**Quality.** Weight, BMI and BP history for antipsychotic care. Labs stay with you.

**Data capture.** 60–80% of people surveyed held back from their clinician.[7] Private screen questions offer another way to answer.

**Productivity.** 3–5 minutes of staff time saved per reading.

## The math

With **8.9%** of CCBHC positions vacant in 2025,[5] **20 readings a day** gives back 1 to 1.7 staff hours, every day.

## Recommended setup

Netsmart and Epic are live

| | |
|---|---|
| **PS-2000D** | Lobbies and day programs: BP, pulse, weight and BMI |
| **PS-2000CX** | Tight spaces: BP and pulse. Ask about availability. |

**In the field:** over 7,000 units are deployed, many in behavioral health settings as part of whole person care.
