PHARMACY & RETAIL

FDA-CLEARED · CLASS II
US VALIDATED DEVICE LISTING

Twelve refills a year. Twelve chances to catch a problem.

Part D Stars triple-weight RAS antagonist adherence, and a patient counts only at 80% of days covered. Plans have tied pharmacy pay to that score. But a fill record shows the refill, not whether the pressure is at goal.[1]

The **PharmaSmart PS-2000D Health Station** gives patients a validated reading at refill time and your pharmacist a number to talk about, unattended.

13 vs 7
median pharmacy vs primary care visits a year, Medicare[2]

1 in 5
of Medicare RAS antagonist users nonadherent, 2014[3]

Over 2×
closure risk, independents vs chains, 2010–2021[4]

83%
of CA chain pharmacists lack consult time, 2021[5]

Where it fits your store

At refill pickup. A reading while the script fills, no tech pulled from the queue.

Front of store. A reason to come inside instead of using the drive-through.

Between prescriber visits. Results by print, text or email, with referral prompts.

On the screen. Promote your vaccines, MTM and med sync, or run paid ads.

What it moves for your pharmacy

Quality. An objective number to open adherence and MTM conversations.

Accuracy. The only kiosks on the US Validated Device Listing.

Productivity. 3–5 minutes of staff time saved per reading.

Data capture. 60–80% of people surveyed held back from their clinician.[6] Private screen questions offer another way to answer.

The math

Against staff-taken readings, **20 a day** gives back 1 to 1.7 staff hours daily. Unattended, the station never competes with the fill queue.

Recommended setup

Ask about availability

PS-2000D	Larger stores: BP, pulse, weight and BMI
PS-2000CX	Independents and smaller stores: BP and pulse, smaller footprint

In the field: more than 7,000 PharmaSmart stations are deployed nationwide. Public health deployments include the Arkansas Department of Health, with 90 Local Health Units,[7] and the New York City Department of Health.
